

Heat capacity of the process

Y13 (2013) — English translation

With an ideal monatomic gas, the processes 1–2 and 3–4 occur (Fig. 1). Let, at a given scale, a point with coordinates (p_0, V_0) be visible from the origin at an angle α_0 .

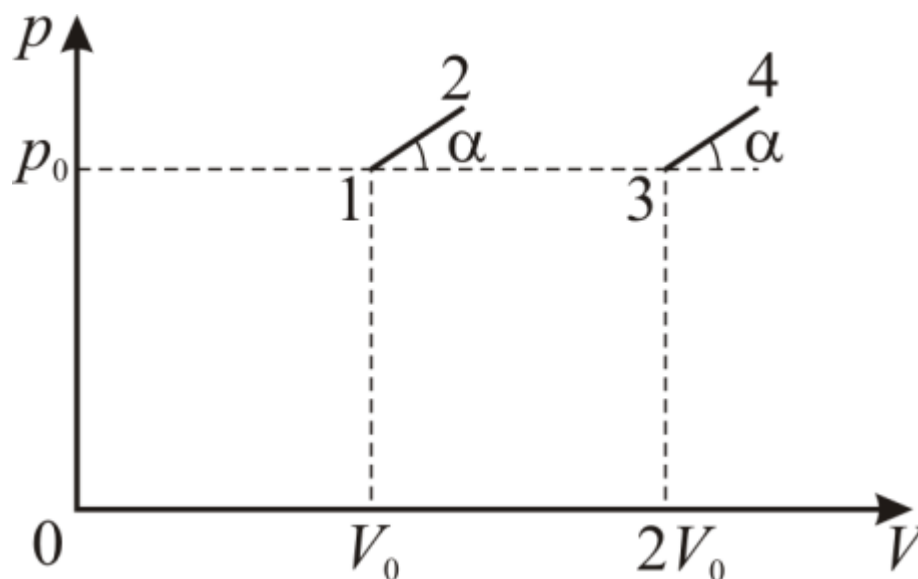

Fig. 1.

- | | | |
|-----------|--|----------|
| A1 | For what angles α is the heat capacity at point 1 of the first process equal to the heat capacity at point 3 of the second? | 0 |
| A2 | For what angles α is the heat capacity at point 1 of the first process greater than the heat capacity at point 3 of the second? | 0 |
