

Heat capacity of the process

Y13 (2013) — English translation

With an ideal monatomic gas, the processes 1 – 2 and 3 – 4 occur (Fig. 1). Let, at a given scale, a point with coordinates (p_0, V_0) be visible from the origin at an angle α_0 .

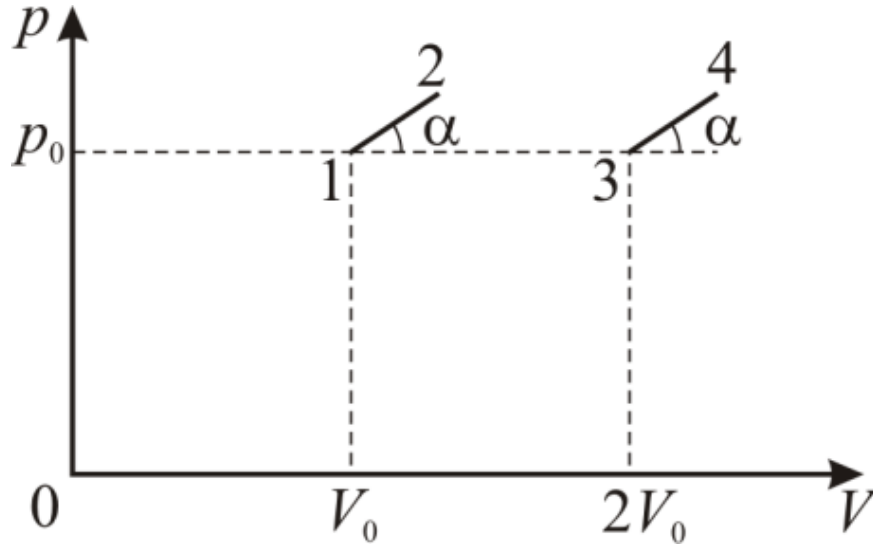

Figure 1: Figure 1.

A1	For what angles α is the heat capacity at point 1 of the first process equal to the heat capacity at point 3 of the second?	0
-----------	--	----------

A2	For what angles α is the heat capacity at point 1 of the first process greater than the heat capacity at point 3 of the second?	0
-----------	--	----------
