

Stopping ball

Y17 (2017) — English translation

A ball of radius R is spun around its axis to an angular velocity ω_0 . The ball is placed in a hole of radius $r_1 < R$ and it stops in time T_1 . The coefficient of friction between the ball and the hole is μ .

A1 In what time T_2 will the ball stop with the same initial angular velocity if it is placed in a hole of radius $r_2 < R$? 3.00
